Dear Resident,

for more than two years we have been fighting against the very dangerous and life-threatening coronavirus. A lot of research is being done worldwide to defeat this virus. Scientists agree that vaccination is the best protection against getting seriously ill with coronavirus and infecting others.

Vaccination is recommended for almost all adults and also for children over 12 years of age. Even just a few weeks after the 2nd vaccination, the protection provided by the vaccine (basic immunisation) takes effect. In Germany, around 75% of people have now been vaccinated twice. Many have received an additional booster vaccination after a certain period of time in order to maintain the vaccination protection in the long term. This third vaccination is strongly recommended, and I myself have already been "boosted".

As a resident of refugee accommodation, you should also get vaccinated.

You may be living with many people in one house and sharing a kitchen, toilets and showers. You are therefore at greater risk of getting infected.

I would therefore like to ask you to get vaccinated.

Here you will find further information that is constantly updated - including in your native language:

The more people are vaccinated, the faster we can defeat coronavirus. Stay healthy.

Gudrun Brendel-Fischer, Member of State Parliament
Integration Commissioner of the Bavarian State Government
